PROFILE

Computer Systems Engineering student focused on AI, IoT, and computer vision. Experienced in developing efficient real-time and multithreaded applications, with strong problem-solving and software optimization skills.

EDUCATION

Instituto Politécnico Nacional – ESCOM

2021 – 2026 (Expected)

Bachelor's in Computer Systems Engineering

EXPERIENCE

Systems Engineering Intern

Mar 2025 – Aug 2025

SIECORP – Guanajuato, Mexico

- Developed an IoT-based mobile app to remotely control irrigation pumps using ESP32 and REST APIs.
- Implemented a real-time vehicle detection and classification system using computer vision and RT-DETR.
- Assisted in testing, optimization, and deployment of embedded systems for IoT integration.

PROJECTS

Vehicle Counter and Classifier (AI-based)

AI-powered system for real-time vehicle detection, counting, and classification.

- Built with Python, OpenCV, RT-DETR, and ONNX Runtime.
- Applied multithreading to enhance performance and reduce latency.

Mobile App + IoT for Irrigation Control

Smart irrigation system integrating a mobile app and an ESP32 microcontroller.

- Developed using Kotlin, C++ (ESP32), and REST APIs for bidirectional communication.
- Designed for reliable cloud-device synchronization and automated irrigation scheduling.

AI Video Reel Generator

Tool that generates short narrated videos using AI-generated visuals.

- Implemented in Python with MoviePy, Stable Diffusion, and TTS.
- Designed a multithreaded rendering pipeline for faster video generation.

SKILLS

Languages & Frameworks: Python, C++, Java, Kotlin, JavaScript (HTML, CSS), Node.js, React
Database: MySQL

Tools & OS: Git, Linux, Windows

Languages: Spanish (Native), English (B2 – Intermediate-Advanced)
